**BECAUSE WATER IS PRECIOUS**

No training required • User friendly • Eliminates waste replenishment • No excessive water bills

# THE NEW ECO-FRIENDLY FILTRATION SYSTEM IS HERE

This easy to use filtration system is not only eco-friendly but saves time and money. With its pump and tank arrangement there is no need to connect to a mains water supply or waste system. It has been shown that today lens edgers consume on average 20 to 30 litres of water for a single frame, if the edger has no filter tank, the dirty water moves directly into the circuit wastewater, creating serious pollution. Neimo® filters large debris through a cloth filter and any fine particles through the cartridge filter, leaving you with uncontaminated re-circulating water. This particular system only requires 25 litres of water to operate. Maintaining the system is simple, disposable cartridge filter change is needed every 1000 lenses. The entire system has been designed to avoid additional installation. Due to the compact size, this unit will fit under all work surfaces and its wheels make for easy manoeuvering.

- Ecological: No more polluting particles in wastewater. Conserves water usage
- Economical: No daily water changes. Neimo® only requires 25 litres of water to function.
- Simple: The only procedure needed is to change the filter every 1000 lenses (total time 5 min).
- Self-sufficient: Neimo® simply plugs into the outlet of the edger and automatically operates upon lens cutting cycle. Thereby ensuring the system is only in use when the operator is present.
- Universal: Fits with all brands and models of bench mount lens edgers.
- Dimensions: Length 64cm x Width 45cm x Height 63cm (without wheels)
- Weight: 33kg
- Voltage: 230volts / 50hz / 4amps
